Wood Stains have varying drying times depending on the application method. When applied with the "Rag on, Rag off" technique, it dries in about 1.5 hours at 25°C and 50% humidity. Using a 4-6mm roller on softwood takes around 2 hours, while hardwoods need about 2.5 hours to dry.

For coverage, undiluted stain covers approximately 10-14m<sup>2</sup> per litre on softwoods and 14-16m<sup>2</sup> per litre on hardwoods. When mixed as a tint with products like Monothane, Duothane, Tungseal, or Modified Oil, it covers about 10m<sup>2</sup> per litre.
